Top 10 Benefits of the iMRS PEMF System
1. Very sustainable!

The iMRS product family is manufactured and for sale since 1996 and continuously developed since then. The recent iMRS represents the 5th generation and is to date the most sold PEMF system for home use in the world.

2. Very efficient!

The iMRS is the only stationary PEMF system in the world which features both, scientifically documented and proven wave forms, Sawtooth and Squarewave!

3. Inspired by Nature!

The iMRS is the only stationary PEMF system in the world with an implemented solid copper coil design allowing defined and increasing intensity levels from the top to the bottom of the whole body applicator. This feature enables to perform gentle applications and mimics the natural absorption of the earth magnetic field for human beings.
4. Interactive!

The iMRS is the only stationary PEMF system in the world with an optional implementation of dynamic biofeedback control. The iMORE system contains of a photoplethysmographic sensor and specific software evaluating the heart rate variability (HRV) of the user and automatically adjusts intensity levels during an application if necessary!
5. Integrated Database!

The iMRS is the only stationary PEMF system in the world with an integrated and pre-programmed database (iGUIDE) allowing the user to customize an application based on the actual condition!

6. Fully upgradable!

The iMRS is the only stationary PEMF system in the world with the possibility to upgrade functions and accessories over time via available SD-Cards!

7. Developed by Science!

The iMRS is the only stationary PEMF system in the world developed and designed based on fundamental PEMF research featuring all known earth-based and atmospheric frequencies incl. the resonating frequencies researched by Adey & Bawin (Biological Window)!
8. Combinable with Brain Wave Stimulation!

The iMRS is the world’s only stationary PEMF system, which simultaneously allows pulsed magnetic field application AND brainwave entrainment! The iSLRS System expands the iMRS to the possibility of using specific light, color and sound frequencies to stimulate the brain to increase and optimize the holistic wellness effect during each application.
9. Built-in organ clock!

The built-in organ clock automatically regulates the applied frequency pattern depending on what time of day or night the user performs a whole body application. With only 3 simple taps on the touch screen (application time, intensity and start button) a PEMF application can be started immediately.
10. Full Compliance!

The iMRS system fulfills all legal requirements in regards to product safety, product usability and is officially certified as a medical device in Europe, USA and Canada!

Additional benefits of Omnium1 and iMRS systems from Swiss Bionic Solutions:

- Both systems include a 3-year warranty valid for the available applicators, 3-year warranty for the iMRS control unit and the option to extend the warranty up to 5 years (A small fee applies)!

- Both systems are manufactured under the highest standards and policies of the Swiss and German regulatory boards!

- Swiss Bionic Solutions solely uses high-quality materials and components in order to provide precise, sustainable and pleasant operation!

- Both systems are characterized by the best price-performance ratio in the entire industry!
